

 FIGMA PROTOTYPE PRESENTATION

TalentVerify AI Frontend Architecture

A comprehensive walkthrough of the proposed UI/UX design for AI-driven resume screening and candidate ranking.

DESIGN TOOL

Figma Prototype

TARGET TECH STACK

React.js & Tailwind CSS

AUDIENCE

Lecturer & Project Supervisor

Design Objectives & User Flow

Design Objectives

- ✓ **User-Friendly Interface:** Clean visual hierarchy crafted specifically for recruitment workflows.
- ✓ **Intuitive Navigation:** Seamless side navigation allowing instant access to jobs and applicants.
- ✓ **Clear AI Insights:** Direct display of candidate AI scores, skill matching, and rank summaries.
- ✓ **Consistent UI System:** Standardized components for predictable, responsive implementation.

End-to-End User Flow

- 1 Secure Recruiter Login & Portal Access
- 2 Dashboard & Job Posting Management
- 3 Candidate Resume Upload & Bulk Processing
- 4 AI Automated Screening & Match Analysis
- ✓ Candidate Ranking & Shortlisting

UI Components & Implementation

Core UI Component System

Navigation Sidebar

Fixed side navbar providing fast switching between Dashboard, Jobs, and Candidates.

Metric Cards

Quick analytics showing total applicants, AI screening velocity, and match rates.

Candidate Tables

Filterable table views with search, sorting, and status badges (Shortlisted / Pending).

AI Score Gauge

Visual percentage indicators for AI match confidence and resume skill alignment.

This Figma prototype serves as the single source of truth for our upcoming React.js frontend development.

Architectural Highlights

Design Tokens

Centralized color schemes, typography scales, and spacing standards mapped directly to Tailwind CSS utility classes.

State Management

Reactive UI state handling candidate filters, search parameters, and real-time AI scoring status updates.

Responsive Design

Fluid layout grids optimized for desktop recruitment portals as well as tablet reviewing modes.
